

Faculty AI Prompts

Thirteen ready-to-use prompts for the work that surrounds great teaching — grounded in learning science, organized around the four pillars of effective course design. Most are built for any AI tool you already use (ChatGPT or Claude). A few are built for **Klas**, the AI teaching coach inside KlasUp.

How to use these: find a prompt, copy it, paste it into your AI tool, and fill in the parts in [BRACKETS] with your own course details. Every prompt below is selectable text — highlight it and copy.

Course Design

The architecture of learning — how thoughtfully your course is built.

1. Learning Outcomes Builder

PASTE INTO CHATGPT OR CLAUDE

I'm designing a course called [COURSE NAME], a [LEVEL - e.g., intro undergraduate / senior seminar / graduate] course in [DISCIPLINE]. The course covers [LIST 3-5 MAJOR TOPICS OR UNITS].

Write 5-7 measurable learning outcomes for this course. Spread them deliberately across Bloom's taxonomy - don't cluster them all at "understand" and "remember." Include outcomes at the higher levels (analyze, evaluate, create) appropriate to the course level.

For each outcome: start with a measurable action verb, keep it to one sentence, and label which Bloom's level it targets. After the list, point out any cognitive levels I'm light on so I can decide whether that's intentional.

Pushes you toward a full range of Bloom's levels — the foundation of strong course design.

2. Scaffolded Assignment Sequencer

PASTE INTO CHATGPT OR CLAUDE

I have one major assignment in my course [COURSE NAME]: [DESCRIBE THE FINAL ASSIGNMENT - e.g., a 12-page research paper, a semester-long business plan, a capstone project].

Break this single large assignment into a scaffolded sequence of smaller building-block stages spread across [NUMBER] weeks. Each stage should build on the one before, so students develop the skills and content gradually instead of facing the whole thing at the end.

For each stage give me: a short title, what the student produces, roughly when it's due, and one sentence on how it feeds the next stage. Keep the stages low-stakes early and higher-stakes later.

Turns one daunting deadline into a guided sequence — scaffolding made real.

3. Build a Lesson Plan with Klas

USE INSIDE KLASUP

Klas, help me build a full lesson plan for one class session.

Here's what you need to know: the course is [COURSE NAME], the topic for this session is [TOPIC], the class runs [LENGTH - e.g., 75 minutes], and it's [IN-PERSON / ONLINE]. My students are [LEVEL].

Walk me through building a plan that opens with something more engaging than "here's today's agenda," includes at least one active-learning moment where students do something rather than just listen, and ends with a quick way for me to check whether the lesson actually landed. Ask me anything you need before we start.

Lesson planning is conversational and multi-part — exactly what Klas is built for.

Inclusive Teaching

How well your course supports all learners.

4. Multiple-Means Assignment Redesign

PASTE INTO CHATGPT OR CLAUDE

Here's an assignment from my course [COURSE NAME]: [PASTE THE ASSIGNMENT DESCRIPTION].

The learning outcome it's meant to measure is: [WHAT STUDENTS SHOULD KNOW OR BE ABLE TO DO].

Suggest 2-3 alternative ways students could complete this assignment that would meet the same outcome but give them a real choice in how they show their learning - for example, a written version, a recorded or spoken version, a visual or built version. For each alternative, keep the rigor the same and note what I'd need to adjust in my rubric. The goal is genuine flexibility, not just easier options.

Offers students multiple means of expression — a core principle of Universal Design for Learning.

5. Inclusive Syllabus Language Check

PASTE INTO CHATGPT OR CLAUDE

Review the following syllabus sections and help me make the language more welcoming and student-centered without weakening the actual policy: [PASTE SECTIONS - e.g., attendance, late work, participation, academic integrity].

For each section: give me a revised version, and one sentence explaining what you changed and why. Flag any language that sounds cold, punitive, or assumes the worst of students, and warm it up while keeping the expectation clear. Then suggest one or two supportive elements I might be missing - like a note on mental health resources, food insecurity support, or how to reach me when a student is struggling.

Warms up the tone of your course while keeping every policy intact — supports belonging.

6. Active Learning Ideas with Klas

USE INSIDE KLASUP

Klas, my lecture on [TOPIC] in [COURSE NAME] is running too one-directional - I'm talking and students are mostly listening. Help me fix that.

The class is [SIZE - e.g., 15 / 40 / 120 students], runs [LENGTH], and is [IN-PERSON / ONLINE]. Suggest a few active-learning moments I could drop into this session where students actually do something - discuss, apply, solve, or create. Keep them realistic for my class size and format, and tell me roughly how long each would take so I can fit them in.

Gets students doing instead of just listening — with Klas as your thinking partner.

Assessment

How thoughtfully you measure what students are learning.

7. Rubric Builder

PASTE INTO CHATGPT OR CLAUDE

Build a grading rubric for this assignment in my course [COURSE NAME]: [DESCRIBE THE ASSIGNMENT - what students produce and roughly how it's weighted].

The learning outcomes it should measure are: [LIST THE OUTCOMES].

Create a rubric with 4-6 criteria and [3 OR 4] performance levels (for example: Exemplary, Proficient, Developing, Beginning). For each cell, write a short, specific description of what that level of work actually looks like - concrete enough that two different graders would score the same paper the same way, and clear enough that a student could use it to self-check before submitting.

One of the biggest time-savers there is — clear rubrics make grading faster and fairer.

8. Low-Stakes Check-In Generator

PASTE INTO CHATGPT OR CLAUDE

I'm teaching [TOPIC / UNIT] in my course [COURSE NAME], a [LEVEL] course. Before students hit the high-stakes assessment on this material, I want to catch confusion early.

Suggest 4-5 quick, low-stakes formative checks I can use during or at the end of class - things like exit tickets, one-minute papers, a quick ungraded quiz, or a "muddiest point" prompt. For each: tell me what it measures, how long it takes, and how I'd act on what I learn from it. Keep them low-effort to run and easy to fit into a normal class.

Builds in practice and feedback before the big test — healthy formative/summative balance.

9. Outcome-Assessment Alignment Check with Klas

USE INSIDE KLASUP

Klas, I want to make sure my assessments actually measure what I say I'm teaching.

Here are my course learning outcomes: [PASTE OUTCOMES].

Here are the assessments I have planned: [PASTE ASSESSMENTS - exams, papers, projects, etc.].

Check whether these line up. Tell me which outcomes aren't being measured by anything, and which assessments don't clearly connect to any stated outcome. Then suggest how I'd close the gaps. Be honest with me - if something's misaligned, I want to know.

Makes sure you're measuring what you claim to teach — alignment, checked by Klas.

Wellness

How you support the whole student — and yourself.

10. Compassionate Policy Redesign

PASTE INTO CHATGPT OR CLAUDE

Here's a policy from my course [COURSE NAME]: [PASTE THE POLICY - e.g., attendance, late work, missed exams].

Help me redesign it to be more humane and flexible without lowering the bar for the course. Suggest specific, build-in-flexibility options - like dropping the lowest grade, a couple of no-questions-asked late passes, or an alternative deadline path for students having a hard week. For each suggestion, keep the academic rigor intact and tell me in one sentence how it still holds students accountable.

Builds flexibility and compassion into your course design — without lowering the bar.

11. Gut-Check My Course for Hidden Barriers

PASTE INTO CHATGPT OR CLAUDE

Here's my syllabus / course plan for [COURSE NAME]: [PASTE IT, OR THE KEY POLICIES AND STRUCTURE].

Read this the way a struggling student would. Show me the places where someone could quietly fall through the cracks - an unforgiving attendance rule, a single high-stakes assignment worth a huge chunk of the grade, no way to recover after one bad week, instructions that assume everyone already knows how college works. For each barrier you find, suggest one realistic change that would give a struggling student a way back without weakening the course.

A revealing audit of where students quietly fall through the cracks.

12. The Worried-Email Responder

PASTE INTO CHATGPT OR CLAUDE

A student in my course [COURSE NAME] emailed me about something difficult. Here's the situation: [DESCRIBE - e.g., they're overwhelmed, falling behind, dealing with a family or health issue].

Help me draft a reply that's warm and human, takes their situation seriously, and is clear about what happens next with the course - without me overpromising or stepping into a counselor role I'm not trained for. Where it fits, gently point them toward the right campus resource (counseling, advising, accessibility services, the dean of students). Keep it brief and caring, not clinical.

Helps you respond to the hard emails with warmth — and point students to the right support.

13. Faculty Reset with Klas

USE INSIDE KLASUP

Klas, I'm feeling stretched thin this week - teaching is taking more out of me than I have to give right now.

I don't need to fix everything. Just help me think it through: what's one or two small, realistic things I could adjust this week to make teaching feel more sustainable? Be honest and kind with me - acknowledge that this work is genuinely hard, and don't hand me a giant self-care to-do list I don't have the energy for.

Sustainable teaching requires sustainable teachers. A warm, brief reset with Klas.

Want these built into your actual courses — automatically?

KlasUp turns your real teaching materials into evidence-based feedback, ready-to-use assignments and slides, and growth scores grounded in learning science. Klas, your AI teaching coach, is built right in. Start free at klasup.com.
